PROFESSIONAL SUMMARY

Frontend & Web3 Engineer with 3+ years of experience building and shipping production-grade decentralized applications and responsive web interfaces using React, TypeScript, and modern frontend tooling. Experienced in performance optimization, scalable state management, smart contract integration, API-driven interfaces, and wallet-connected user flows across EVM ecosystems. Proven track record of improving frontend performance by up to 65% through rendering optimization, lazy loading, and code splitting — with measurable Core Web Vitals impact.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Solidity, Rust

Frontend: React.js, Next.js, React Hooks, Redux Toolkit, Context API, Tailwind CSS, SPA Architecture, Web Accessibility (a11y)

State & Data: REST APIs, Axios, WebSockets, Real-Time Data Feeds, JSON

Performance: Code Splitting, Lazy Loading, Memoization, Core Web Vitals Optimization

Authentication: Token-Based Authentication, Protected Routes, Secure API Communication

Web3: Ethers.js, Web3.js, Hardhat, Foundry, WalletConnect, MetaMask, Smart Contract Integration, On-chain Data Handling

Testing: Jest, React Testing Library, Component Testing, Unit Testing

Tools: Git, GitHub, Postman, Etherscan, CI/CD (GitHub Actions), Agile / Scrum

PROFESSIONAL EXPERIENCE

Frontend & Web3 Developer — Expansion Cyber Technologies — May 2024 – Dec 2025

- Delivered 3+ production dApps using React and TypeScript, serving active users with wallet-connected interactions and smart contract workflows.
- Reduced frontend load time by 50% through code splitting, memoization, lazy loading, and rendering optimization — measurably improving Core Web Vitals.
- Improved overall application performance by 65% by auditing component re-render cycles and introducing async data strategies.
- Integrated Ethers.js for secure smart contract reads, writes, and event listening across EVM-compatible chains.
- Architected predictable frontend state management using Redux Toolkit, eliminating race conditions in async on-chain transaction flows.
- Collaborated with smart contract engineers to translate Solidity ABIs into type-safe TypeScript interfaces for seamless frontend consumption.

Frontend Engineer — Psychinsight — Jun 2023 – Oct 2023

- Built a responsive benefits administration platform from scratch using React.js, Redux, and Tailwind CSS, optimized across desktop and mobile viewports.
- Strengthened API security by implementing token-based authentication, input sanitization, and secure API communication patterns — eliminating exposed endpoints returning raw user data.
- Developed a reusable, accessible UI component library that improved delivery consistency and reduced duplication across the platform.

FEATURED PROJECTS

HyperHaus — Web3 Social Trading Guilds Platform

- Architected a full Web3 platform using React, TypeScript, Redux Toolkit, and Tailwind CSS enabling traders to form guilds, coordinate strategies, and share on-chain rewards.
- Designed real-time guild dashboards powered by live on-chain event feeds, with deterministic UI state and transparent reward tracking via Ethers.js smart contract integration.
- Implemented multi-wallet onboarding flow (MetaMask, WalletConnect) reducing first-time dApp user friction and improving engagement for both traders and developers.

PacDash — Real-Time Solana DeFi Analytics Dashboard · pac-dash.vercel.app

- Built and deployed a production DeFi analytics dashboard tracking \$2.8B+ in open interest, 24h volume, funding rates, PnL, and whale activity across 77+ live Solana markets.
- Integrated wallet connectivity and live on-chain Solana data feeds powering Markets, PnL, Risk, Whale Feed, and Funding pages with real-time refresh cycles.
- Embedded Social Intelligence via Elfa AI for trending token news, combining on-chain analytics with off-chain sentiment data into a unified trader experience.
- Architected a modular, scalable frontend with deterministic state management for high-frequency live data updates — deployed and live at pac-dash.vercel.app.

CERTIFICATIONS

- AltSchool Africa — Software Engineering (2024)
- Cyber Ocean Institute — Blockchain Development (2024)
- Udemy — Solidity, Hardhat & dApp Development (2024)
- Three Million Technical Talents — Cohort 1 (2024)

EDUCATION

B.Tech, Physics Electronics — Federal University of Technology Akure (FUTA)
